PROJECTS UNDERTAKEN

❖ **Project Title: Online Shopping Website**
Description: An E-Commerce website was created using PHP as Front-End and MySQL/Mongo DB as
Back-End which listed products stored in the database and also stored customer information such as their
addresses, credit/debit card information, past purchases. It also allowed users to shop for new items under
various categories and also made an imitation of a payment gateway. An admin profile was established
which tracked all the users, their purchases, shipments, etc.

❖ **Project Title: E-Health Monitoring and Detection using Wireless Sensor Networks**
Description: A project that includes real time monitoring of a patient's vital signs and also alert
emergency services in case of catastrophes. Doctors can monitor patient data, suggest medicine, etc.
Doctors and Patients can both book appointments. Used JSP and Java for developing web server. Used
android for smart device application. Used Arduino Uno and sensors for sensing and sending
information.

❖ **Project Title: Statistical Analysis of Basketball players using K-Means**
Description: Front End was developed using Java while Cassandra was used as a database. It stored
player information like Jersey No. (Primary Key), Name, Baskets, Age, etc. We could add, modify as
well as delete data. Using K-means we could classify the players as Low, Medium and High with respect
to performance.

IT PROFICIENCY

Programming Language: C, C++, Java, HTML, PHP.
Web Server: LAMP (Linux, PHP, MySQL).
Databases: MySQL.
Operating System: Windows, Linux(Ubuntu)
